CERT-In Vulnerability Note CIVN-2026-0468
 Multiple Vulnerabilities in Apple Products

Original Issue Date:September 21, 2026

Severity Rating: HIGH

Software Affected

- Apple iOS versions prior to 26.7
- Apple iPadOS versions prior to 26.7
- Apple macOS Golden Gate versions prior to 27
- Apple macOS Tahoe versions prior to 26.7
- Apple macOS Sequoia versions prior to 15.8
- Apple tvOS versions prior to 27
- Apple watchOS versions prior to 27
- Apple visionOS versions prior to 27
- Apple Safari versions prior to 27
- Apple Xcode versions prior to 27

Overview

Multiple vulnerabilities have been reported in Apple Products, which could allow a remote attacker to execute arbitrary code, or cause denial of service (DoS) conditions on the targeted system.

Target Audience:

Individuals and organizational using affected Apple operating systems and devices.

Risk Assessment:

High risk of arbitrary code execution, denial-of-service conditions, and unauthorized access to sensitive information.

Impact Assessment:

Potential for complete system compromise, data theft, and service disruption.

Description

Multiple vulnerabilities exist in Apple Products due to out-of-bounds read/write, integer overflow, use after free, type confusion, race conditions, memory corruption, authentication issues, authorization weaknesses, permission flaws, path traversal, and improper input validation. A remote attacker could exploit these vulnerabilities by sending a specially crafted request to the targeted system.

Successful exploitation of these vulnerabilities could allow an attacker to execute arbitrary code, elevate privileges, obtain/disclose sensitive information, bypass security restrictions, cause memory corruption, cause denial of service (DoS) conditions on the targeted system.

Solution

Apply appropriate fixes as mentioned in Apple security Updates:
